STORMWATER PROGRAM – EROSION CONTROL  
ENVIRONMENTAL COMPLIANCE, 500 12TH AVE S

OFFICE (208) 468-4442  
NAMPA, IDAHO 83651

## **Attention: Residential Home Builders**

The City of Nampa has established an Erosion and Sediment Control Program to comply with State and Federal storm water requirements. It is the intent of this program to reduce or eliminate the potential for storm water pollution during the construction process. Please observe the following Best Management Practices (BMP's) during the **entire** construction process:

- Keep all trash on site in a designated trash bin. Maintain trash bins on a regular or as needed basis. Lumber may be neatly stacked temporarily on site and not in the Right-of-Way.
- Protect all storm drain inlets in the vicinity of the project site. This may include inlets across the street or 'downstream' from the construction activity. All inlet protection must be properly maintained and inspected on a **regular** basis to be effective.
- If applicable, install perimeter controls to prevent sediment from exiting the boundaries of the project site.
- Absolutely **No** track out of mud or dirt onto the public right of way is allowed. If sediment is tracked onto the road or sidewalk it is to be cleaned up immediately. Clean up of sediment track out is to be swept and not washed away with water. Exclusive use of an effective stabilized construction entrance will help prevent track out of sediment onto the public Right-of-Way.
- Placement of sediment, road mix, landscaping material or any construction debris on the public Right-of-Way is strictly prohibited.
- Control excessive dust and protect all unstabilized exposed soil from wind and storm water runoff.
- Post an **approved** City of Nampa Erosion and Sediment Control Permit/Job Card visible with current information on the Responsible Person at or near the construction entrance.
- Utilize Concrete Washout areas for the proper disposal of excessive concrete product and equipment rinse water. Dispose of paint, chemicals and hazardous materials in the approved method. Washout area must be lined properly to eliminate seepage, spillage, or accidental runoff. If a washout area is full, excess must be properly disposed of or additional washouts need to be made.
- A certified Responsible Person must be on site during **all** grading and construction activities.

Strict adherence to these BMP's will help ensure an effective Erosion and Sediment Control Program for both the Residential Home Builders and the City of Nampa. Deviations from these BMP's may result in various methods of enforcement. If you have any questions or concerns please feel free to contact Greg Goodman at 468-4442. Thank you for your continued cooperation.
